Customer Testimonials

Adjusted the 600kg electric kiln in just 10 minutes!

Heavy Object: 600kg Electric kiln
Size: W575/D495/H740
Number of Workers: 2 Time: 10 minutes

The final few centimeters usually take the most time. We were really surprised at how smoothly it went; the fine adjustments at the end truly saved the day. Those last few centimeters made a significant difference and brought immense relief.

〈By a user of "SB-A20"〉

STEP 1

Transfer the heavy object to the designated location.

STEP 2

Pair two sheets together with the slippery sides facing each other to form a set.

STEP 3

Jack up to lift the object and place the paired SuberunPaper sheets under the foundation of the object and place the object back on the floor.

STEP 4

Glide the object, finalize the installation position and then jack up the object again to just enough to be able to pull out the SuberunPaper.

Repositioning completed.

How to use

! If the surface is not flat, SuberunPaper may not work smoothly. Please use a flat surface such as an iron plate to ensure smooth sliding.

Banana peels are slippery, and so is Suberun Paper.

While "slippery" usually means danger, with a little ingenuity, it can also mean convenience. When installing heavy objects such as large machinery, Suberun allows you to smoothly glide them back and forth, left and right, enabling easy fine adjustments to be made to their position.

Roll type

Product Code: **SB-A30R**
 Size: 300mm×30m
 Weight: About 1.0kg
 Coefficient of Friction: 0.02-0.03

Product Code: **SB-A50R**
 Size: 500mm×30m
 Weight: About 1.7kg
 Coefficient of Friction: 0.02-0.03

Product Code: **SB-A20**
 Size: A4×20Sheets
 Weight: About 120g
 Coefficient of Friction: 0.02-0.03

For clean rooms

Product Code: **SB-CR16**
 Size: A4×16Sheets
 Weight: About 85g
 Coefficient of Friction: 0.03-0.04

Maximum Weight: Less than 10 tons Adjustment Range: Within 100mm
 SuberunPaper is not designed for transporting heavy objects.
